Built-in kitchen appliances
2022 Spring Collection

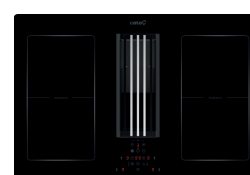

Michelin (who publishes the ranking of the World's 50 best restaurants every year) has repeatedly named **El Celler de Can Roca**, as the best restaurant in the world. With this recognition, **El Celler de Can Roca** has reached the very peak in world cuisine.

Cata is proud to be working together with the Roca brothers on developing products that will help bring Michelin Star cooking to your home. Thanks to Cata's collaboration with **El Celler de Can Rocca** the knowledge and experience of master chef's can be built into the performance and functionality of our products.

Cata Appliances

CATA ELECTRODOMESTICOS SL, manufacturer of household appliances, was founded in Spain in 1947. Since then, we have been pioneers in domestic extraction and surface cooking. We are a global manufacturer, with production facilities across 3 continents. Our Global product portfolio includes downdraft extractors, hoods, hobs, ovens, microwaves, sinks & taps, dishwashers, washing machines, refrigerators, wine coolers, bathroom extractors, air purifiers and kitchenware.

At CATA we are constantly researching the next innovation. We only use top-quality components together with the latest manufacturing techniques to deliver the best possible user experience, backed by reliability and efficiency. Our range of products is supported by a UK wide supply chain and service network, in order to ensure that we maintain the highest level of commitment to our customers.

Efficiency & Quality

At CATA we are committed to protecting the environment in which we live and believe that your kitchen can lead the way in energy efficiency. We strive to develop products that create a more sustainable, clean and welcoming world.

Our low energy appliances will contribute to a better climate for our children as well reducing energy costs for today.

As a measure of the quality and reliability of our appliances, we offer a FREE 5 year parts & labour warranty* on selected products featured in this brochure.

*subject to registration

Integrated Appliance Range

Stylish Technology

With clever technology and a sleek appearance, Cata ovens are reliable, easy to use, and come with lots of extra features to help you deliver delicious meals every day.

Our built-in ovens are designed to fit seamlessly underneath your kitchen worktop, or within a column for convenient eye-level cooking.

Used as a standalone oven or combined within a bank of appliances Cata provides 60cm single ovens, 45cm Combi microwaves and a 15cm warming drawer.

Taking care of your family with a delicious home-cooked meal has never been easier - grill, bake and roast in one multi-function oven. Handy features such as programmable timers, easy-clean enamel interiors and inner doors take the effort out of cooking.

Cooking can be easily managed with a programmable timer or minute minder. The programmable timer can be set for a specific time and will turn the oven on or off after the time has elapsed. The minute minder will count down for the specified time and will sound an alarm at the end of that period, but the oven will remain on.

Ovens

Fan controlled cooking offers even cooking as the heat generated by the element at the back of the oven is circulated around the cavity by the fan. This function allows simultaneous cooking on all levels without the transfer of flavours. The function means that little preheating is required using less energy and it even keeps the oven cleaner.

Conventional cooking is ideal for traditional style cooking using heat from the top and bottom of the oven. This function delivers perfect results for bread, cakes, tarts and pastries.

Base heat can be used for cooking cakes, biscuits and is also an ideal function for slow cooking.

The **Pizza function** uniformly distributes the heat generated at the bottom of the oven. This setting is ideal for pizzas and ensures a perfectly crisp base and a delicious melted topping. This function is also great for quiches and flans.

Fan assisted cooking is ideal for a variety of dishes from meat to fish to casseroles.

Turbo grill is ideal for grilling portions of meat and poultry, giving a crisp outside and a succulent inside. The fan and grill elements operate at the same time, with the fan circulating heat whilst the food is cooking. This function is perfect for cooking the "Great British Breakfast".

The **Dual grill** delivers full width variable grilling. The inner and outer part of the grill is used giving full and even coverage.

The **Single economy grill** uses less energy, only the inner part of the grill is used – ideal for burgers, fish fingers, bacon or the odd slice of toast.

The **defrost function** is suitable for defrosting any type of food, from meat and vegetables to delicate items such as cream cakes. In ovens the fan circulates air around the food at room temperature defrosting in less than half the time.

Keep warm setting is available on the ovens, combi microwave and warming drawer. A low heat is generated keeping food warm without drying out. It is also perfect for warming plates, serving a hot meal every time.

Bread/Fermentation is available on the ovens and warming drawer and is ideal for bread proofing, yoghurts, pickles and crème fraîche.

The Microwave function is ideal for reheating and cooking ready meals. This method is a quick and efficient – ideal for busy lives.

The combination of **Microwave & grill** allows you to cook meals quickly and efficiently whilst creating a crisp browned finish and without losing flavour.

Combining the **Microwave, grill & fan** delivers all the benefits of fan assisted cooking in a fraction of the time.

The **Automatic programmes** allow you to cook quick and simple meals at the touch of a button. Simply enter the weight and the microwave does the rest.

The **Pause button** will quickly pause both the heating of the food and the timer. Once you are ready to go again re-press the pause button and everything will resume as it was before.

Cooking can be easily managed with a **programmable timer** or **minute minder**. The programmable timer can be set for a specific time and will turn the oven on or off after the time has elapsed. The minute minder will count down for the specified time and will sound an alarm at the end of that period, but the oven will remain on.

The **Child lock** can be activated on ovens and microwaves to prevent accidental tampering. Just hold down two keys for a few seconds to provide an extra level of safety for your family.

Multifunction Oven with Touch Controls

COE615BK

Black glass

11 Oven Functions

- Fan cooking
- Conventional cooking
- Base heat (slow cooking)
- Fan + base heat (pizza cooking)
- Fan assisted cooking
- Turbo grill
- Dual grill
- Single Grill
- Defrost
- Keep Warm
- Fermentation function (bread proofing & yoghurt)

Oven Features

- Touch controls
- Animated LCD display
- Electronic clock, minute minder & programmable oven timer
- Temperature indicator
- Digital temperature control
- Pause function
- Easy clean enamel interior
- Chrome side racks with 5 cooking levels
- Double glazed door with easy clean removable inner glass
- Bright oven light
- Unbranded to match any kitchen

Hobs

State-of-the-art cooking with innovative features and excellent performance. Cata hobs make an impressive statement in any kitchen. Offering a selection of hob types in different sizes, from the innovation of induction to traditional gas. All hobs have safety features as standard to protect your family while delivering optimum cooking results.

Induction hobs deliver the most responsive form of cooking both in terms of precision and controllability. Induction is the safest and most energy efficient way to cook on a hob. Cata has created 'the best of both worlds' by combining a zoneless induction hob with a high performance downdraft extractor.

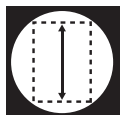

Using clever technology beneath a ceramic glass surface, an inductor creates a magnetic field when a pan with suitable iron content is placed on the cooking zone. This magnetic reaction instantly produces heat in the base of the pan. (not within the hob zone itself) As it is the base of the pan that heats up, surrounding areas of the hob remain cool to touch, so it is even possible to wipe clean during cooking) When the pan is lifted from the hob, the only heat on the glass is that which has been transferred back from the pan.

Cata's Gas on Glass hobs offer a stylish touch to this traditional method of cooking. Easy to wipe clean and with all hobs equipped with a powerful 3.5kW triple crown wok burner and safety gas shut off, professional cooking is at your finger tips.

Hobs

All Cata induction hobs come extra features to help you create the tastiest of meals.

Flexible zoneless areas give you freedom to cook anywhere within the defined area. This feature combines multiple inductors to create a larger more flexible zone, ideal for larger cookware or for controlling multiple pots at the same temperature at a single touch.

Cooking can be easily managed with a **programmable timer** or **minute minder**. The programmable timer can be set for a specific time and will turn the hob off after the time has elapsed. The minute minder will count down for the specified time and will sound an alarm at the end of that period, but the hob will remain on.

The **booster function** diverts extra power to each zone selected delivering rapid heating in the shortest possible time.

The **pause function** will simultaneously pause all cooking zones along with any timers that are in operation. Once you are ready to go again re-press the pause button and everything will resume as it was before.

The **Keep warm** setting brings the cooking zone down to a steady low heat, keeping food warm without drying out, for when you are ready to serve.

The **TFT** utilises intuitive touchscreen technology to maximum the cooking experience, allowing you to flick through the screen in any direction and select options at the touch of a finger. The animated display helps guide you through the cooking process.

During cooking, the volume of air in the kitchen should be renewed approximately 10 times. The Cata induction downdraft incorporates a high performance extraction motor delivering **580m³/h**, powerful enough to clean the air of even the most demanding kitchen.

Cata offers a complete range of quiet appliances. The induction downdraft can extract and clean the air in your kitchen at **45 dB** – which is the same noise level as bird song.

All Cata induction hobs come with 8 safety features built-in as standard.

Auto-safety shut off. The hob automatically switches off if inadvertently left on. The Switch off period varies based on the combination of time and temperature. Power level 1-3 = 6 hours, 4-6 = 3 hours, 7-8 = 2 hours, 9 = 90 minutes.

The **Child lock** can be activated on electric hobs to prevent accidental tempering. Just hold down the key(s) for a few seconds to provide an extra level of safety for your family.

The **Anti-overheat** feature maintains a safe surface to pan temperature. If the temperature exceeds safe parameters the hob will automatically shut off to prevent pans igniting. The hob will reset once a safe temperature is reached.

The **Anti-overflow** feature automatically shuts the hob off if liquid should happen to boil over onto the control panel.

Automatic pan detection detects when suitable cookware is placed on the cooking zone. This clever safety feature means that the hob will never heat up when there is no pan on the zone.

Residual Heat Indicator. A warning light is displayed on the control panel whilst the surface temperature remains hot to the touch.

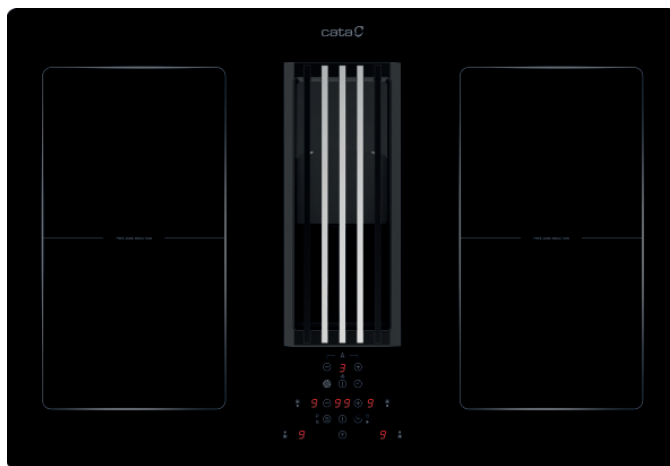

Small object detection distinguishes between small items such as cutlery and larger cookware, in order that the cooking zone is not activated accidentally.

Control panel protection detects excessive heat on the control panel, so the hob will automatically shut off if a hot pan is accidentally placed on the controls.

77cm Induction Downdraft with Flexible Cooking Zones

CiDZ770F

Black glass with frameless edge

Hob Features

- 4 separate induction zones with 2 flexible zoneless areas
- Touch controls
- 4 programmable timers with shut off
- 4 programmable minute minders
- Unbranded to match any kitchen

Hob Safety Features

- Auto safety shut off (time & temperature dependant)
- Child lock
- Anti over heat
- Anti over flow
- Automatic pan detection
- Residual heat indicators
- Small object detection
- Control panel protection

12 Power Settings

- 9 power levels per zone
- Separate booster for each zone
- Pause function
- Keep warm function

4 Induction Zones

- Front Left 190x190mm 2.8kW
- Rear Left 190x190mm 2.0kW
- Front Right 190x190 2.8kW
- Rear Right 190x190mm 2.0kW
- Flex zones 190x380mm 3.6kW

Extractor Features

- 5 extraction speeds plus booster
- Maximum extraction level 580m³/h
- Noise level 45-64dB
- Delayed shut off timer
- Metal extractor grill
- 2 metal grease filters (dishwasher safe)
- Automatic extraction mode
- Filter saturation indicator (extractor)

Dimensions (MM)

Built-in aperture: H300 x W750 x D490

Ducting Diameter: 150

Hoods

Hoods can provide a stunning focal to any kitchen or be discreetly integrated into the kitchen furniture or ceiling. Powerful yet quiet, the Cata range of hoods provides a breath of fresh air when cooking your favourite dishes.

With a diversity of styles and dimensions, there is a model to suit every preference, from designer wall hoods to island hoods and fully integrated downdraft and canopy extractors.

All Cata hoods are equipped with metal grease filters, which capture and lock away the grease from cooking fumes. Once saturated they can be easily removed and cleaned in a dishwasher. All extractors have the option of recirculation using a charcoal filter or extracting outside via 150mm ducting kit.

Cata hoods come with a range of innovative features, such as digital touch controls, delayed shut off, perimeter aspiration and adjustable lighting, to deliver a cleaner, quieter, easier cooking experience.

Hood Types

Downdraft extractors are designed to be integrated at hob height into kitchen units. When extraction is required, the downdraft elevates above pan height to provide maximum extraction and can then be retracted when not in use. With touch control and digital display, these models feature 4 power levels and delayed stop. Available in 60cm and 90cm widths to suit any hob.

The **ceiling extractor's** integrated design provides a sleek and natural appearance, particularly when installed above island units. The powerful extraction unit not only efficiently cleans the air, but also provides ambient lighting, with which to enjoy your meal.

Beautifully styled, the **glass canopy hoods** fuse the cleanability of glass with the professional look of stainless steel. With touch control and digital display, these models feature 6 power levels and delayed stop. Available in 60cm and 90cm widths to suit any hob.

During cooking, the volume of air in the kitchen should be renewed approximately 10 times. Cata hoods have high performance motors delivering extraction levels up to **850m³/h**, powerful enough to clean the air of even the most demanding kitchen.

When cooking has finished the hood should continue to extract in order to clean the remaining particles from the air. Cata extractors feature **delayed shut off timers**, so you can sit down to enjoy your meal, let the hood finish doing the work and then shut down automatically.

Cata offers a complete range of quiet appliances. Hoods can extract and clean the air in your kitchen at noise levels as low as **36 dB** – which is about as loud as a whisper.

Designer wall hoods offer stunning design with outstanding performance and create a distinctive look in any kitchen. Models are available in the ultra modern vertical style or angled slightly over the hob. All models feature touch controls, perimeter aspiration and delayed stop. Available in 60cm, 70cm, 80cm and 90cm widths to suit any hob.

Integrated canopy hoods blend in perfectly with the kitchen furniture and are the most versatile type of hood as they will fit within wall, island or corner units. With touch controls, these models feature 3 power levels and delayed stop. Available in 52cm and 75cm widths to suit any hob.

Either in black or stainless steel **Chimney hoods** give a professional look to a kitchen. They can be fitted to a wall as a stand alone feature or installed between furniture. Available in 60cm and 90cm widths to suit any hob.

Perimeter Aspiration system uses a panel of glass to create a 'venturi' effect, which helps to capture smoke, steam, grease and oil more effectively. This makes extraction quieter, more powerful and more energy efficient.

The **booster function** gives additional extraction power to the hood for a fixed period of time. Ideal for the more intense periods during cooking, such as frying a steak.

88cm Downdraft Extractor

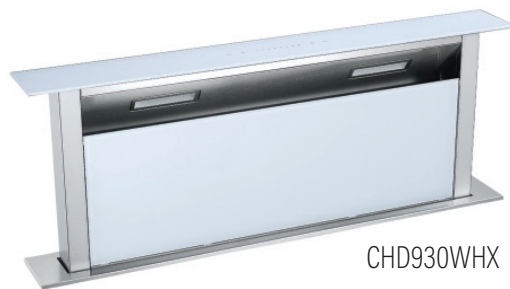

CHD630BKX

Black Glass with Stainless Steel

Hood Features

- Digital touch & slider controls
- 4 extraction speeds
- Motorised lift system
- Concealed when not in use to give flush finish

90cm Vertical Wall Hood

CHW950BKX

Black Glass with Stainless Steel

Hood Features

- Digital touch controls
- 4 extraction speeds (including booster)
- Opening front panel for intensive extraction
- Perimeter aspiration
- Maximum extraction level 850m³/h
- Noise level 50-65dB
- Cool white LED adjustable hob lights
- Delayed shut off timer
- Metal grease filter (dishwasher safe)
- Anti condensation filter
- Filter saturation indicator
- For use with gas, ceramic and induction hobs

Dimensions (MM)

- Overall : H755-1070 x W900 x D290
- Ducting Diameter: 150
- Ducting kit accessory for external extraction: Code KITVENT2
- Filter kit for internal recirculation: Code 02859398

Integrated cooling

Side by Side. The Tall larder fridge and freezer make a perfect pair sited side by side. This configuration provides optimum food preservation capacity in your kitchen – 25% more storage than the average American fridge freezer

Digital controls with temperature display allow you to control and monitor the appliance to a precise temperature, ensuring the foods and liquids are preserved at the perfect level.

Wooden shelves in Cata wine fridges provide an attractive feature. However, they also play an important role in eliminating vibration, which disturbs the sediment in the wine affecting flavour. Unlike metal shelves, wood will not scratch the wine labels.

Glass shelves in refrigerators help maintain high hygiene standards within the fridge, as well as being easier to clean. The shelves are made with safety glass and can be cleaned in a dishwasher. Fridge and freezer drawers are transparent, so you can check on the food with limited impact to the surrounding temperature.

The frost free feature eliminates the need for defrosting. The even distribution of cold air prevents frost forming inside the appliance on both the inner parts and on foodstuffs, so the appliance is not only easier to maintain, it is also easier to read the food labels.

The booster provides a fast cooling function, bringing the appliance to optimum temperature in the shortest possible time to ensure best the preservation of foodstuffs.

Dynamic fan cooling provides superior freshness throughout the refrigerator. The fan ventilation system uses pulsed air constantly diffused within the cavity. Therefore the same temperature is maintained throughout, guaranteeing optimal preservation of foodstuff irrespective of which shelf is used.

Cata offers a complete range of quiet appliances. Cooling appliances can operate at noise levels as low as **39 dB** – quieter than a library.

30cm Wine Cooler

CFW300GM

Gunmetal Glass

CFW300X

Stainless Steel

Features

- Digital touch controls with temperature display
- 6 Removable wooden shelves
- Cool white LED lighting
- Temperature range 5°C – 22°C

Washing

With two high capacity models, both the washer and washer dryer offer a wide choice of programmes providing total flexibility to suit any family's needs. The Cata laundry appliances inspire all round confidence in performance and washing satisfaction.

The Cata Washer dryer boasts an 8kg capacity – that is 10 bath sheets in a single wash. Ideal for busy families.

No longer just a luxury appliance, the dishwasher has become a necessity for every kitchen. More hygienic than washing by hand, the Cata dishwasher saves water, energy and time.

The simple easy to use programmes use as little as 11 litres of water per cycle. Cata dishwashers deliver superior quality, a robust finish with excellent cleaning performance.

The versatile cutlery holder, foldable plate racks and adjustable upper basket means that the Cata dishwasher can accommodate up to 12 place settings, meaning you load and wash less saving time, water and energy.

Washing Machine Programmes

Cotton: Hard-wearing textiles, heat-resistant textiles made of cotton or linen.

Baby Care: A wash programme specific for baby clothes, which delivers a cleaner wash and longer rinse to better protect the baby's skin.

Jeans: A 1.45hr 40° wash with prewash, specifically for jeans

Mixed: A 1.20hr 40° wash with prewash, for mixed cotton and synthetics

Sports: A 1.11hr intensive 40°/60° wash with prewash, for active wear

Quick: A 15 minute cold wash for lightly soiled clothes.

Wool: For hand or machine washable wool or wool rich textiles. Especially gentle wash programme to prevent shrinkage, with longer programme pauses to soak the clothes.

ECO 40: A long, low temperature 3.35 wash, ideal for maintaining the colours on brighter clothing.

Intensive: A long 3.48hr, 40° wash for hard-wearing textiles, heat-resistant textiles made of cotton or linen.

Delicates: A gentle wash for silk, satin and blended fibres.

Synthetic: A long 40° wash for articles such as whites, shirts, trousers and coats.

Rapid 45°C: A 40° 45 minute quick wash for lightly soiled clothes.

20°C: A low temperature wash for non colourfast clothes.

The **Delayed start** allows you to set your wash to start at a time that is the most convenient and efficient for you.

The **Child lock** can be activated on the washing machines and washer dryers to prevent accidental tempering. Just hold down two keys for a few seconds to provide an extra level of safety for your family.

The **pause function** will pause the wash cycle. Great if you need to add an item after the wash programme has started.

7kg Washing Machine

CWM620

Features

- Electronic controls with digital display

For technical information see page 88

Intensive: For heavily soiled items such as pots and pans with dried on food

ECO: This is the standard program suitable for normally soiled loads, such as pots, plates and glasses.

90 minute wash: For lightly soiled crockery and glass

Rapid: A shorter wash for lightly soiled loads that do not need drying.

Delayed start allows you to set your wash to start 3, 6, 9 or 12 hours which ever is the most convenient and efficient for you.
